

# NOC2go

- monitoring as a service

## Subscribe to the IT monitoring

Unnecessary alarms or incorrectly set up parameters in confusing dashboards, often turns monitoring of servers, storage, networks and applications into a “flashing Christmas tree”. Ensuring an efficient IT monitoring requires resources and experience. A task which is often managed by edgemo’s consultants – typically as consultant assistance, but also as a service to which you can submit.

edgemo NOC2go – Network Operations Center to go – is an enterprise monitoring solution based on Microsoft System Center Operations Manager (SCOM). With a manageable and user-friendly web interface. Supplied as a service. Implementing SCOM usually takes a minimum of five days and one day of maintenance every month to keep it going. edgemo NOC2go can be ready in less than an hour.

With monitoring as a service, there is no initial investment and no maintenance of your own system. The community with other subscribers ensures that everybody benefits from new features without compromising the opportunity of personally customized views. An economic comparison between an OnPremise-solution and NOC2go has found that the business case is more than a clear-cut if you have less than 100 virtual servers.

NOC2go installs as an agent on the company servers, whereupon edgemo’s service platform collects the data. From here, they are presented in customized dashboards, allowing the IT department easy access to important information. The web interface is updated with real time information and can be used to show the current operating status on a big screen – and on your mobile, your tablet, and on your PC, of course. The solution is hosted by edgemo with fully redundant infrastructure for all services. The Self Service Portal is based on the AzurePack web portal.

**Try NOC2go on a free 30-day trial. Email us at [services@edgemo.com](mailto:services@edgemo.com) and we will get back to you the next working day.**
